$BINGO

Whitepaper

With Bingo, it only takes
one little buy to win big.

$BINGO IN A NUTSHELL

Meet Bingo. A crypto-loving, tail-wagging lottery coin with one main goal. To run a very fun, very simple bingo competition that never ends.

Here's how it works:

1

Check the magic code
Whenever we restart the Bingo, we'll release a four digit 'Magic Code' and pin it on our Telegram group.

2

Buy some $BINGO
Buy some Bingo, head to bscscan.com and look for your purchase's 64-digit TX number.

3

Claim your prize
If your TX number contains the Magic Code, chat to @BingoTheDog_Bot and paste the link to claim your prize!

Whenever the winner is confirmed, they'll take the entire pot – and then the Bingo will begin again.

A TYPICAL GAME OF $BINGO

Let's make up a random 'Magic Code'. How about...

5a0d

Now, whenever you buy $BINGO (or anything on the Blockchain) a random 64-digit hexadecimal string is created for that transaction. These can be viewed on bscscan.com. For example:

0xe43d0bd94d49c5fdac3191fb8a1f9c3b4fd5542581fb058bc3a765a0d89645b1

Hot dog, this lucky buyer has the Magic Code in their Transaction ID – which means they've hit the jackpot! The moment they spot it, they message @BingoTheDog_Bot, who'll say:

Woof woof! Feed me a bscscan url and I'll check if you're a winner!

If you send a correct link, it'll alert the devs and we'll investigate right away. Once it's confirmed, the entire prize pool will be transferred to the winner in BNB. Then, we go again!

Woof woof! Read more about our trusty DogBot on page 5

BUILDING THE $BINGO FUND

You're probably thinking, "Where's all this lovely money coming from?"

Well, every time anyone buys or sells $BINGO, a 5% fee will go towards the jackpot. The longer we go before a winner, the bigger the prize will be.

REALLY IMPORTANT RULES

Everyone knows, you can't have a fun competition without a long list of rules. So here they are:

🐕 **The transaction must be a purchase, not a sell.**

🐕 **It must be a purchase of 0.01 BNB or more.**

🐕 **You can't have sold any $BINGO since the last winner.**
This bit is quite important. It basically means, if you sell during a competition, you're out until the new one begins. No being sneaky and transferring between wallets either. Our devs see everything 👀

$BINGO THE DOGBOT

Meet **@BingoTheDog_Bot**. Day or night, he'll be waiting on Telegram, ready to help you collect the jackpot.

If you think you've got a winning TX on your hands, open up a private message with Bingo on TG to wake him up.

After that, he'll ask for your BscScan link. If it looks like a winner, he'll alert the devs, who will investigate and get in touch if it all checks out.

First comes first
It's important to check your TX quickly. The jackpot goes to the first winner to call "Bingo" —even if they weren't the first person to find the magic four digits.

No cheating
Ever tried going to a real-life bingo hall and screaming "BINGO" every few minutes? Spoiler: you get kicked out. So, if you try to cheat our trust DogBot, you'll get banned —no exceptions.

$BINGO-NOMICS

$BINGO isn't just about playing games and winning money. We've also got some fancy tokenomics up our sleeve to help reward long term holders.

On every transaction, there'll be a 10% tax:

🐶 **5%** will go straight into the Bingo prize pool for a big payout

🐶 **2%** will be for a marketing fund, so we can spread the good word.

🐶 **2%** will go towards redistribution towards our holders (paid out in BNB).

🐶 **1%** will be a liquidity fee, to help build a price floor.

This marketing fund will mainly be used to fund ads on PooCoin and other popular websites. We'll also use it to generate cash payouts for community competitions in our Telegram (separate from the Bingo prize pool).

HUGS NOT RUGS

The crypto world is a scary place, especially for brand new coins. The $BINGO dev team is dedicated to being as transparent as possible from the get-go. Here's a couple of ways we hope to earn your trust.

Fair launch
There's probably a reason so many coins do private presales – but we're not into it. It makes buyers nervous and helps bots more than people. So, we'll be going for a 100% fair launch on Pancake Swap.

No big scary wallets
All initial investors and admins will be buying $BINGO from their own pocket at launch.

Burned supply
Unlike most coins, we **won't** be burning any of our supply. We see this as a gimmick – all it does it make the top wallets appear to be holding less than they are. If there's one thing $BINGO doesn't like, it's dishonesty. Also cats.

THE ODDS OF WINNING

Not only have we got a fun competition on our hands, but we've got some pretty clever maths to back it up. If you're into numbers and equations, this is the page for you.

The odds of finding the Magic Code in your TX is approximately **1/1000**, summed up here:

$$\left(\frac{1}{16}\right)^x (65 - x) = odds\ of\ winning$$

x is the number of characters in the string (has to be a whole number).

(1/16) is the number of possible characters in your TX (a hexadecimal has 16 possible characters)

(65 - x) represents the different possibilities of where the string could start in the TX. For a 4-digit string, it can start in any position in the TX, from position 1 to 61, giving 61 possible places the string can start.

So, if x = 4, we get the result:

$$\left(\frac{1}{16}\right)^4 (65 - 4) \approx \frac{1}{1074}$$

Isn't maths fun!

TOKEN INFORMATION

Network: **Binance Smart Chain (BEP-20)**

Token name: BINGO

Token address: 0x25020FF60cAD406Cd3Da04BC35B48259D0582CD5

Decimals: 18

Total supply: 1,000,000,000 BINGO

Burned tokens: 0%
